

*I am a very passionate nineteen year old web developer who started programming the web since 14 years. After high school, I begun as a self taught developer which gave me my first job and now I'm pursuing computer science in the university.*

*Since I entered into the university, I have gained more logical and theoretical proven methods for solving problems and building good algorithms for a particular problem. In addition, I have acquired knowledge and significant work experience about these web technologies; - HTML5 - CSS3 - JavaScript - JQuery - PHP - MySQL - Yii - Laravel - Restful APIs*

*I have developed many web apps through my web development career using these technologies. I have 3+ years of experiencing in programming the web. I can work on both ends of the web, that is, front end and the back end. But my main field of interest is the back end. I have also worked with teams of developers to build large and complex products so I know how to be a team player.*

*I am currently looking for a place that will give me a more challenging and conditional working environment to build more complex and challenging products and through that, I will get more experience through learning.*

*I always push myself towards the best. Thus, I work efficiently and effectively in all my jobs.*

## Technical Skills

**Likes:**     html5, css3, jquery, javascript, php, mysql, laravel, yii, oop, rest, mvc, ajax

---

## Experience

**Web Developer**—Scopic Software July 2015 – Current  
html5, css3, jquery, php, mysql, laravel, yii, oop

Building web applications for many clients using the lamp stack  
Creating a good database architecture for each project  
Working full-stack on some projects  
Being a single developer on some internal projects from scratch to finish

---

**Web Developer**—Elite College, Ghana August 2013 – March 2015  
html5, css3, php, model-view-controller

I created and maintained the schools website during my time as a web developer. I was also incharge of the online marketing and advertisements of the school mainly through google adwords and facebook ads.

In addition I created an intrament school accounts management system for the school using pure PHP OOP with no frameworks.

---

## Education

**B.S. Computer Science**—Kwame Nkrumah University of Science & Technology 2015 – 2019  
computer-science

Best student in the Structured Program Design Course.

---

## Certifications

**Excellence in Web Development - Nabaahni InfoGroups Tech & Graphics Company** 2012 – 2013

---

## Projects & Interests

**GitHub - bankofalgorithms**—<https://github.com/Tech-Emiretus/bankofalgorithms> January 2016  
php

---

## Tools

**First Computer:**     Asus X550ca  
**Favorite Editor:**     Sublime Text
